

Climate Resilience and PPPs

Climate Resilience and PPPs

Section Overview

If structured correctly, PPPs can increase climate resilience offering innovative solutions to address both mitigation and adaptation challenges. This section shares resources to assist the development of climate resilient infrastructure. Find more at [PPP Contracts in An Age of Disruption](#).

Watch this space. The [Climate Resilience and PPPs](#) section is intended to be a living document and will be reviewed at regular intervals. Let us know what you think by taking a [Quick Survey](#).

Many risks associated with climate change will be felt hardest by lower income countries, as their ability to prevent and respond to the impacts of climate change is limited. Against this background there is an urgent need for the development and finance of climate-smart infrastructure solutions. PPPs potentially provide a useful framework under which the public and private sectors can pool and coordinate their financial and technological resources more efficiently.

The Public-Private Partnership Resource Center has a number of sections with resources, practical guidelines, case studies and toolkits to identify, assess, and mitigate climate-related risks and help assist the development of climate resilient infrastructure.
