Management/Operation and Maintenance Contracts

What Are Management and "Operation and Maintenance" Contracts?

The term "management contract" has been applied to cover a range of contracts from technical assistance contracts through to full-blown operation and maintenance agreements and so it is difficult to generalize about them. The main common features are that the awarding authority engages the contractor to manage a range of activities for a relatively short time period (2 to 5 years). Management contracts tend to be task specific and input rather than output focused. Operation and maintenance agreements may have more outputs or performance requirements.

The simplest management contracts involve the private operator being paid a fixed fee by the awarding authority for performing specific tasks - the remuneration does not depend on collection of tariffs and the private operator does not typically take on the risk of asset condition. Where the management contracts become more performance-based, they may involve the operator taking on more risk, even risk of asset condition and replacement of more minor components and equipment.

Key Features of Management/O&M Contracts

- Contractor to manage a range of activities;
- Generally short term, usually for two to five years;
- Traditionally been favored as transitional arrangements for introducing the private sector into managing infrastructure but longer term operation and maintenance agreements are becoming more common in the water and energy sectors where more extensive participation by the private sector through a lease, affermage or concession arrangement in these "essential services" is deemed to be too politically sensitive or impractical;
- Commonly found in the water sector and, to a more limited extent, energy sector;
- Limited potential for improvements in efficiency and performance although more sophisticated management contracts (which are often called operation and maintenance contracts) may introduce some incentives for efficiency or improved bill collection, by defining performance targets and basing a portion of the remuneration on their fulfillment (and cover longer time periods);
- Operator is usually paid a fixed fee to cover its staff and expenses. There may also be a performance based fee and liquidated damages for failure to achieve performance parameters;
- Operator may be required to collect bills on behalf of the utility and may accept some collection risk in terms of performance standards but is unlikely to collect bills on its own behalf;
- Can be useful where condition of assets is uncertain where the private sector would be unwilling to accept more extensive risk;
- Some may also include obligations on the private operator to operate and maintain the assets, sometimes extending to bearing the cost of routine replacement of small, low value parts of equipment. Such features require more monitoring to ensure that the outputs are being achieved and usually involve higher establishment costs;
- Operating agreements are also usual in relation to BOT/ concession arrangements, with the concessionaire sub-contracting the operations phase of the concession to an operator;
- Usually no transfer of employees to the contractor - the contractor will merely add a layer of management over the existing utility structure. This often causes problems if the staff of the utility still
look to the awarding authority, their employer, for instructions. Enforcement of discipline by the private operator may also be difficult.

For an analysis of whether a management contract is the most appropriate solution in a given situation, go to [Benefits and Risks of PPPs](#).

The World Bank has developed a [Standard Form Management Contract](#) together with Bidding Document and Technical Note recommended for use on water and energy projects the Bank is funding. Also included is a Technical Note discussing management contracts and their preparation. Go to the General Conditions in the Bidding Documents for the contract itself.

For a viewpoint of a management contract working in practice in the water sector in Venezuela, please check [Management Contracts and Water Utilities: The Case of Monagas State in Venezuela](#).
