Kenya

- [Kenya Water Act 2002](#) - The Act provides for the decentralisation of powers from the national to the regional and local level; the separation of water resources management from water and sanitation service delivery, as well as the institutional separation of policy, regulatory, asset holding and operational functions. Following the provisions of the Act, the transfer of asset ownership from the Water Ministry and the National Water Corporation to seven regional Water Services Boards (WSBs), and most local governments have handed over their assets to the WSBs. While the WSBs are in charge of asset development and bear overall WSS service responsibility within their areas of jurisdiction, they appoint Water Services Providers (WSPs) to actually provide the service. In urban areas WSPs are mostly local authority-owned utilities that have been established as commercialized, publicly owned companies. In rural areas community-managed projects are being transformed into formally recognized WSPs. The Water Services Regulatory Board has been created to supervise water services provision.
