

# **Project Finance – Key Concepts**

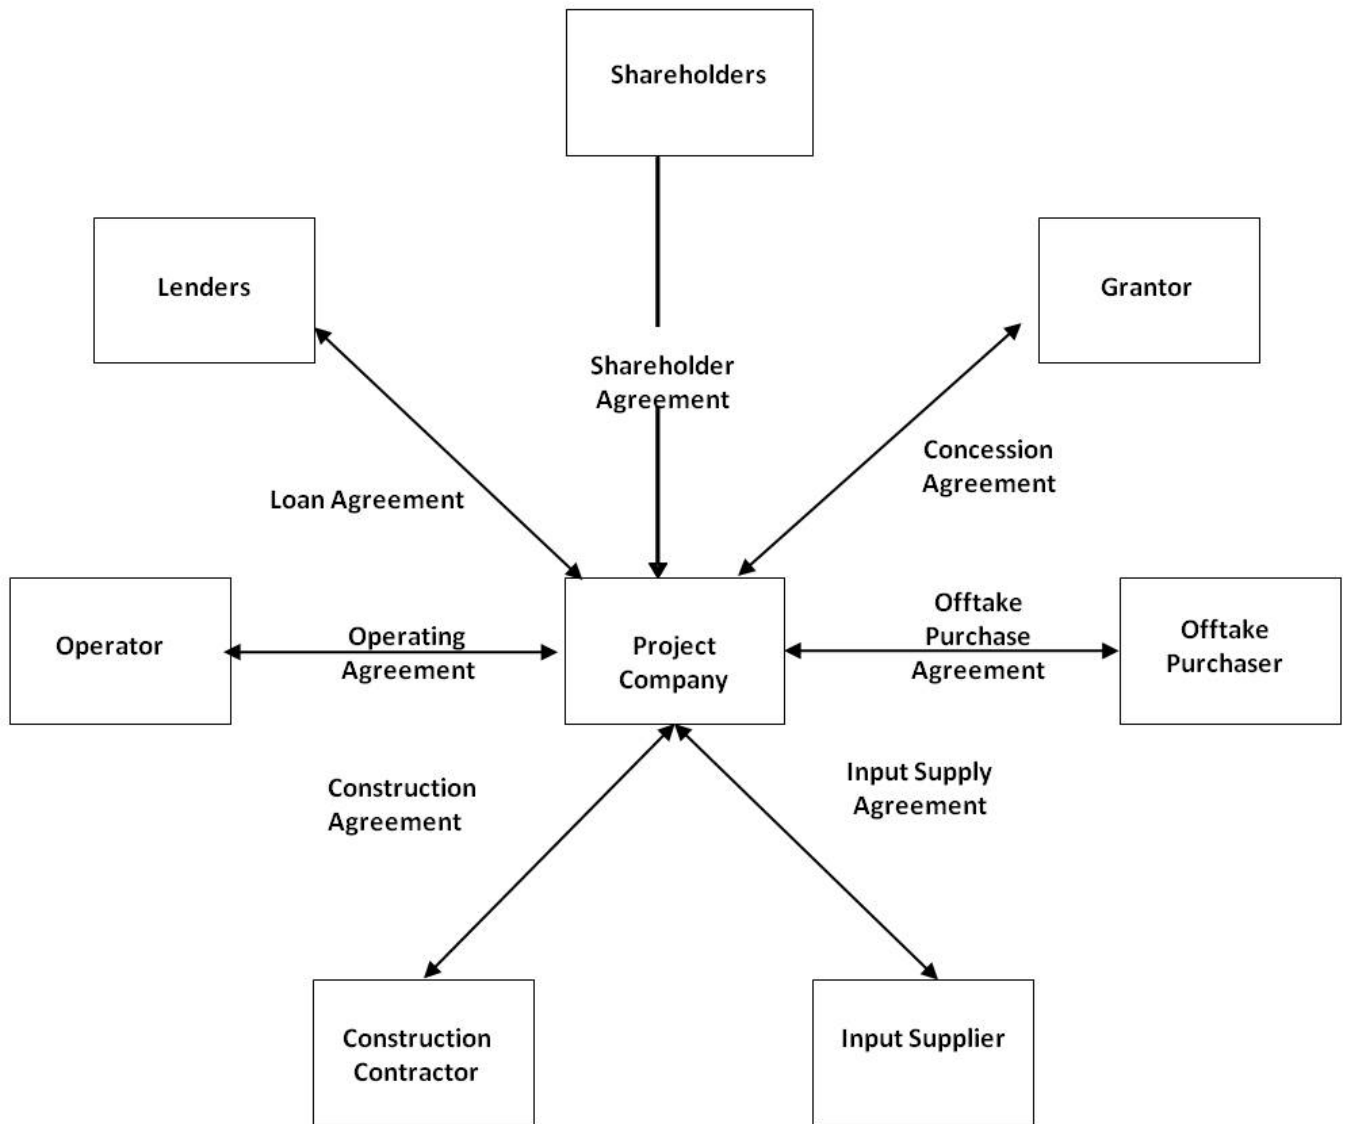

Full Description

## **Project Finance - Key Concepts**[\[1\]](#)

### **Typical Project Finance Structure**

The typical project financing structure (simplified for these purposes) for a build, operate and transfer (BOT) project is shown below. The key elements of the structure are:

- Special purpose vehicle (SPV) project company with no previous business or record;
- Sole activity of project company is to carry out the project – it then subcontracts most aspects through construction contract and operations contract;
- For new build projects, there is no revenue stream during the construction phase and so debt service will only be possible once the project is on line during the operations phase (parties therefore take significant risks during the construction phase);
- Sole revenue stream likely to be under an off-take or power purchase agreement;
- There is limited or no recourse to the sponsors of the project (shareholders of project company are generally only liable up to the extent of their shareholdings);
- Project remains off-balance-sheet for the sponsors and for the host government.

As can be seen, there are a number of contracts and the arrangements are complex. The interrelation between the different parties needs to be carefully provided in the agreements.

## Off-Balance-Sheet

Project financing may allow the shareholders to keep financing and project liabilities off-balance-sheet. Generally, project debt held in a sufficiently minority subsidiary is not consolidated onto the balance sheet of the respective shareholders. This reduces the impact of the project on the cost of the shareholder's existing debt and on the shareholder's debt capacity, allowing the shareholders to use their debt capacity for other investments. Clearly, any project structure seeking off-balance-sheet treatment needs to be considered carefully under applicable law and accountancy rules.

To a certain extent, the government can also use project finance to keep project debt and liabilities off-balance-sheet, taking up less fiscal space. Fiscal space indicates the debt capacity of a sovereign entity and is a function of requirements placed on the host country by its own laws, or by the rules applied by supra- or international bodies or market constraints, such as the International Monetary Fund (IMF) and the rating agencies. Those requirements will indicate which project lending will be treated as off-balance-sheet for the government.

Keeping debt off-balance sheet does not reduce actual liabilities for the government and may merely disguise government liabilities, reducing the effectiveness of government debt monitoring mechanisms. As a policy

issue, the use of off-balance-sheet debt should be considered carefully and protective mechanisms should be implemented accordingly. For more on management of government risks and contingent liabilities, go to [Management of Government Risks](#).

## **Non-Recourse Financing**

Recourse financing gives lenders full recourse to the assets or cash flow of the shareholders for repayment of the loan in the case of default by the SPV. If the project or SPV fails to provide the lenders with the repayments required, the lenders will then have recourse to the assets and revenue of the shareholders, with no limitation.

Project financing, by contrast is “limited” or “non-recourse” to the shareholders. In the case of non-recourse financing, the project company is generally a limited liability special purpose project vehicle, and so the lenders' recourse will be limited primarily or entirely to the project assets (including completion and performance guarantees and bonds) in the case of default of the project company. A key question in any non-recourse financing is whether there will be circumstances in which the lenders do have recourse to part or all of the shareholders' assets. The type of breach of covenant or representation which gives rise to this would typically be a deliberate breach on the part of the shareholders. Applicable law may also restrict the extent to which shareholder liability can be limited, for example liability for personal injury or death is typically cannot be limited.
