

Sector-Specific Materials

Full Description

The extent to and way in which gender considerations could be incorporated into the design and implementation of an infrastructure project to promote gender inclusion depend at least to some degree on the specific infrastructure sector.

The links below lead to sector-specific resources, as well as international policy and guidance documents that include a gender perspective into infrastructure projects. They were mainly developed for traditionally financed infrastructure projects but are also useful resources for public-private partnerships (PPPs).

- [Energy](#)
- [Transportation](#)
- [Water and Sanitation](#)

Alternatively, quick snapshots of the sector-specific materials are available below.
