

Identify Contract Management Team Responsibilities in Asset Recycling

Full Description

The contract management team should be headed by a project manager. The project manager should be an employee of the Relevant Authority, not an external advisor, and should have sufficient authority to carry out the role effectively.

The key responsibilities of the contract management team should include:

- Developing and implementing the contract management plan.
- Ensuring that both parties meet their contractual obligations and ensuring performance specifications are achieved.
- Monitoring private sector performance and enforcing remediation steps where necessary.
- Administering institutional obligations and protect institutional rights in the contract.
- Managing risks and preventing and/or resolving disputes; and
- Managing approved changes/variations.
