GETTING INFRASTRUCTURE RIGHT: A FRAMEWORK FOR BETTER GOVERNANCE

Edwin Lau
Head OECD Budgeting and Public Expenditures Division
Seoul, 23-34 May 2019
Ensuring quality infrastructure investment is primarily a governance challenge

Quality of public governance correlates with public investment and growth outcomes at the national and subnational levels

OECD, 2013

Around 30% of the potential gains from public investment are lost due to inefficiencies

IMF, 2015

10-30% of investment in a publicly funded construction lost through mismanagement and corruption

COST, 2012

Poor governance increases the cost of infrastructure by around 40%

McKinsey, 2013
A Framework for the Governance of Infrastructure: Getting Infrastructure Right

- 10 dimensions or "success factors"
- Outset of normative recommendation
- Key questions decision maker needs to address
- Benchmark indicators identifying enabling factors

Countries can use the framework to assess the adequacy of their infrastructure management systems.
